

**ROTATOR CUFF REPAIR  
LARGE/MASSIVE TEAR  
POST-OP REHABILITATION PROTOCOL  
Dr. SANKO**

\*Please note on prescription if any deviation from protocol is preferred.

0-6 Weeks

Immobilization in sling  
Initiate shoulder PROM - forward elevation and external rotation  
Pendulum exercises  
AROM of elbow, wrist, forearm and hand with elbow at side  
Active scapular exercises (shrugs and retraction)  
Grade I and II glenohumeral and scapulothoracic joint mobilization for pain control  
Modalities PRN  
Scar management following staple removal

6-12 Weeks

Continue above stretches  
Initiate PROM - internal rotation, cross body abduction, and extension  
    Gradually work toward pure abduction  
Initiate AAROM - progress to AROM as able  
Initiate rotator cuff isometrics (submaximal)  
Grade II and III glenohumeral/scapulothoracic joint mobilizations  
Scapular strengthening below shoulder level  
Initiate light strengthening for shoulder IR, ER, and Extension when  
    full AROM is achieved (theraband)  
Modalities PRN  
Pool therapy PRN

12-16 Weeks

PROM/AAROM/AROM of shoulder with emphasis on end range  
Initiate deltoid and supraspinatus strengthening - progress to rotator cuff  
Scapular strengthening  
Bodyblade/plyometrics  
Appropriate variable resistance and/or gentle free weight resistance as tolerated  
Modalities PRN

16 Weeks to 6 Months

Bodyblade into elevated positions  
Work/sport specific exercises PRN  
Work hardening PRN  
Return to work/sport as directed by physician
